#### **DETAILED ACTION**

## Response to Amendment

1. Applicant's arguments and amendments with respect to claims 14-21 have been fully considered but are most in view of the new ground(s) of rejection.

Claims 1-13 had been canceled.

# Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 14 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent No. 6,614,796 ("Black et al.") in view of US patent No. 6,141,355 ("Palmer et al.").

Regarding Claims 14 and 19, Black et al. teach a fibre channel arbitrated loop (FCAL) switch (see Fig. 4) with multi-mode configuration including a hub mode (See Fig. 8, Col. 36, lines 3-7), said switch comprising a switching device as a crossbar switch (100 as matrix of switches, see Fig. 4) connected by a plurality of input signal lines (104-108 NL) and connected by a plurality of output signal lines (106-NL), wherein the numbers of the input lines and the output lines are to be assigned, and the individual switching per input

Application/Control Number: 09/915,612

Art Unit: 2663

lines and output lines are configurable by control processor ad routing table (See Fig. 4, Col 14, lines 9-22).

Black et al. teaches substantially all the claimed invention but did not disclose expressly the particular application involving limitations of

"for at least one of the N fibre channel inputs, the closing at the same time of at least two switches associated therewith, whereby at least two of the M fibre channel outputs are both connected with the at least one of the N fibre channel inputs."

Palmer et al. teaches that the crossbar switch supports multicast which means that different output ports may be configured to follow a signal that appears on the same input port at the same time (See Fig. 4A, Col. 10, lines 47-55).

A person of ordinary skill in the art would have been motivated to employ Palmer et al. in Black et al. in order to obtain a FCAL switch connection and to take advantage of multicast capability wherein different output ports may be configured to follow a signal that appears on the same input port at the same time in claims 14 and 19.

The suggestion/motivation to do so would have been to configure different output ports to follow a signal that appears on the same input port at the same time, as suggested by Palmer et al. in Col. 10, lines 47-55. At the time the invention was made, therefore, it would have been obvious to one of ordinary skill in the art to which the invention pertains to combine Palmer et al. with the Black et al. to obtain the inventions specified in claims 14 and 19.

Regarding claim 16, this claim has limitations that is similar to those of claims 14, thus it is rejected with the same rationale applied against claim 14 above.

Application/Control Number: 09/915,612

Art Unit: 2663

<u>Regarding claim 17</u>, this claim has limitations that is similar to those of claims 14, thus it is rejected with the same rationale applied against claim 14 above.

<u>Regarding claim 18</u>, this claim has limitations that is similar to those of claims 14, thus it is rejected with the same rationale applied against claim 14 above.

## Allowable Subject Matter

4. Claims 15, 20-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims and if no art rejection can be applied.

# Examiner's Statement of Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance:

The prior art along or in combination fails to teach or make obvious the following limitations:

"a first fibre channel device having a fibre channel input and a fibre channel output, the fibre channel output of the device connected with a first one of the N fibre channel inputs of the matrix of switches, the fibre channel input of the device connected with a first one of the M fibre channel outputs of the matrix of switches.

Art Unit: 2663

a second fibre channel device having a fibre channel input and a fibre channel output, the fibre channel output of the device connected with a second one of the N fibre channel inputs of the matrix of switches, the fibre channel input of the device connected with a second one of the M fibre channel outputs of the matrix of switches,

A fibre channel analyzer haying a fibre channel input, the fibre channel input of the analyzer connected with a third one of the M fibre channel outputs of the matrix of switches,

the switches of the matrix disposed such that the first one of the N fibre channel inputs is connected to the second one of the M fibre channel outputs and is also connected with the third one of the M fibre channel outputs." as recited in the independent claims 15 and 20.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard Chang whose telephone number is (571) 272-3129. The examiner can normally be reached on Monday - Friday from 8 AM to 5 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ricky Ngo can be reached on (571) 272-3139. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
